

REFLEX

FROM FRAGMENTED COORDINATION TO A
VISIBLE DELIVERY WORKFLOW

TEAM REFLEX | WEEK 3 FINAL SPRINT

RETAILER → DISPATCHER → RIDER

THE PROBLEM

Delivery coordination is fragmented.

WhatsApp + Phone Calls

No single view of:

Assignment • Status • Confirmation

Bottom line

Manual follow-ups.

Uncertain delivery progress.

Retailer → Dispatcher → Rider

THE SOLUTION

Reflex creates one trackable delivery workflow.

LOG → ASSIGN → UPDATE → CONFIRM

Retailer → Dispatcher → Rider

One shared delivery record

One record. One lifecycle. Clearer visibility.

HOW REFLEX WORKS

RETAILER

LOG DELIVERY

DISPATCHER

ASSIGN RIDER

RIDER

UPDATE STATUS

CONFIRM DELIVERY

DELIVERED

DELIVERY LIFECYCLE

PENDING → ASSIGNED → PICKED UP → DELIVERED

ARCHITECTURE

STACK

NODE.JS + JAVASCRIPT CLI
NO EXTERNAL DEPENDENCIES

STORAGE

SHARED JSON FILE
SINGLE SOURCE OF TRUTH

DATA MODEL

ID • CUSTOMER • ITEM • STATUS • RIDER •
TIMESTAMPS

LIFECYCLE

PENDING → ASSIGNED → PICKED UP → DELIVERED
FORWARD-ONLY STATUS TRANSITIONS

TRADE-OFFS

01 – CONFIRMATION

Typed code instead of scanning

CLI has no camera or QR-scanning capability.

02 – SYNC

Checkpoint instead of real-time

Detects changes since the previous sync.

03 – STORAGE

JSON instead of database

Fast and simple for the sprint MVP.

04 – REASSIGNMENT

Warn instead of block

Makes conflicting reassignment visible but allows it.

Intentional simplifications for the sprint MVP

ROADMAP

NOW

CLI MVP

LOG • ASSIGN • UPDATE • CONFIRM

NEXT

PRODUCTION FOUNDATION

DATABASE • API • AUTHENTICATION • RELIABLE SYNC

LATER

RICHER DELIVERY VISIBILITY

GPS • PROOF OF DELIVERY • NOTIFICATIONS • ANALYTICS

**MVP WORKFLOW → PRODUCTION PLATFORM → RICHER
VISIBILITY**

TAKEAWAY

Reflex turns fragmented delivery coordination into a visible, trackable workflow.

Retailer → Dispatcher → Rider

One record. One lifecycle. Clearer visibility.
